CONSOLE

The Axia® Altus virtual mixing console is controlled by ip-vdesk. Everything is centralized for simplicity and efficiency.

This console is in a completely dematerialized environment via the cloud. This eliminates the need for physical equipment and additional hardware, reducing costs.
What's more, it offers a sleeker studio and a clutter-free workspace.

It's optimally flexible, so you can organize the structure and layout to suit your own personal taste.

INSERTS

The Telos VXs virtual VoIP phone system is controlled by ip-Screener.

The system can be scaled on demand to handle simultaneous and multiple calls.

WebPhone and OPUS options enable high-quality inserts and ensure clear, precise communication on every call.

INTERCOM

The Telos Infinity® VIP virtual intercom platform offers an ideal circuit for collaborative and remote working.

This cloud-based solution can be accessed from anywhere, via an IOS or Android app, or an HTML page.
It features Push-to-Talk simplicity and integrated insert management.

## BROADCAST

STREAMING

studio zero offers multicodec streaming, including MP3, AAC and HEAAC.

It features advanced metadata management for artist music titling. It also offers a choice of bitrates, from low to high definition.

µMPX

The µMPX codec provides a direct link to the transmitter, integrating RDS.

Integration of KANTAR watermarking for médiamétrie data.

SOUND TREATMENT

Omnia® Forza

Omnia9s

FORZA

Forza uses the advanced audio processing of the Omnia range with a 5-band processor.

Easy configuration via HTML web page guarantees simple, intuitive operation and precise adjustment.

OMNIA9s

Omnia Enterprise 9s virtual audio processing software is the enhanced software version of the legendary Omnia 9.

This version incorporates a powerful declipper designed to enrich sound dynamics and improve audio quality.

AUTOMATION

The studio zero solution offers complete, automated management for smooth, optimal broadcasting.

To optimize organization, ip-plan enables efficient planning of the elements to be broadcast.
Music programming with ip-pressplay ensures a continuous flow.

Broadcasting can be automatic or manual, as required.
In automatic mode, ip-suite/ip-vdesk automation manages off-air pick-ups, as well as any programmed macros required for program execution.

SACEM copyright management is simplified thanks to the DIP4 format for compliant and regulatory declarations.
