USER MANAGMENT

The ip-desktop module manages user rights for each profile in the solution. By managing access to content, applications and actions, you can grant or restrict the access required by an administrator, producer or user.

In "super administrator" mode, you can administer the ip-suite solution for an identified population.

User authentication is LDAP-compatible.

TRACEABILITY

For technical expertise, it is necessary and possible to trace all events according to desired search criteria, with data display filter options.

This technical dimension makes it possible to trace users' previous actions, in order to check for errors or omissions, or to have a targeted view while displaying transactions in real time.

SYSTEM CONFIGURATION

Ip-desktop lets you customize your ip-suite solution with a wide range of possible configurations, including LDAP, trademarks, transmitters, databases and storage.

VERSION MANGEMENT

With ip-desktop, you're guaranteed efficient management of update packages. Updates can be deployed either partially or globally.

Access to scheduling means you can stay informed at all times and manage new version updates with precision..

LICENSE MANAGEMENT

Ip-desktop manages licenses and subscriptions.

SAFETY MANAGEMENT

This solution meets authenticated security standards with ISO 27001 and RGPD certifications.

It also holds the Code Signing Certificate and respects HTTP protocols to ensure absolute security.

Centralized software business tool

AI

The ip-desktop module lets you declare and configure subscriptions to outsourced IA services.

The available AI options are :

- SpeechToText Sound-to-text conversion
- Generative AI VoiceML audio generation
